

Process Engineer

BPM Inc. is seeking a Process Engineer, responsible for promoting safety, quality improvements, new product development, process optimization, and cost reduction at the manufacturing facility in Peshtigo, WI.

Key Responsibilities:

- Be a role model for safety by promoting a safe work environment and by engaging in safety initiatives
- Provide technical assistance to the production areas
- Support high-quality product standards and work to reduce product variability
- Work with outside technical resources and suppliers to initiate cost reduction, quality enhancement, and process improvement trials
- Build relationships with the hourly workforce and provide technical training on process improvements and changes that impact safety, quality, costs, operations, and efficiencies
- Provide weekend on-call coverage for the paper mill on a rotating basis
- Develop leadership skill-set and take on increasing levels of supervisor responsibilities

Preferred Qualifications:

- Degree in a technical field relating to chemical engineering. Previous mill experience is a plus but not a requirement.
